Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Študent oz. kandidat mora imeti predmet opredeljen kot študijsko obveznost.

Prerequisites:

The course has to be assigned to the student.

Vsebina:

Predmet se izvaja kot laboratorijske vaje, podprte s seminarskimi vajami. Praktične vaje vključujejo skupinsko projektno delo, teoretično in eksperimentalno, na specifični tematiki – materialu s ciljnimi lastnostmi: od načrtovanja in sinteze materiala do končne karakterizacije produkta.

V prvem sklopu študentje zberejo potrebne informacije za načrtovanje sestave, strukture in postopka sinteze specifičnega produkta s ciljnimi lastnostmi. Identificirajo uporabne tehnike in metode za spremljanje poteka sinteze in za določanje lastnosti produkta.

V drugem sklopu študentje sintetizirajo produkt. Spremljajo napredovanje sinteze ter

Content (Syllabus outline):

The course implements laboratory work, supported by seminar exercises. Practical course includes project team work, both theoretical and experimental. Students in groups design a specific material with desired properties. Material design includes planning, synthesis, and product characterisation. Project starts with literature survey regarding composition, structure and synthesis route of a desired product. Students specify methods of controlling the synthesis progress and characterization techniques of the products. Project continues with experimental laboratory work. Students follow progress of synthesis and effects of synthesis parameters on structural

vpliv procesnih parametrov na strukturo in lastnosti materiala.
V tretjem sklopu študentje interpretirajo dobljene rezultate ter razložijo vplive sestave, procesa sinteze in strukture materiala na uporabne lastnosti materiala.
Vsebina projektnega dela je izbrana tako, da študenti pri delu pridobijo čim večji obseg strokovnih in socialnih kompetenc.

and functional properties of the products. Finally, students analyse the obtained results and interpret functional and structural properties of the obtained products with regard to process parameters during the synthesis. The content of the project work is selected so that students acquire the widest possible range of professional and social competencies.

4. Kaufman E. N., Characterization of Materials 1&2, A John Wiley and Sons Publication, New Jersey, 2003, 1392 strani. (30%)

Cilji in kompetence:

Študenti pridobijo ali okrepijo kompetence s področja poznavanja in rokovanja z naprednimi karakterizacijskimi metodami in znajo kritično presoditi o smiselnosti uporabe določene tehnike. Seminarske vaje, vpete v laboratorijsko delo, povežejo eksperimentalno dobljene rezultate s teoretičnimi. Študenti tako pokažejo, da so sposobni računsko ovrednotiti specifične probleme s področja materialov in jih povezati z mehanskimi, električnimi, termičnimi lastnostmi izbranih materialov. Delo v skupini vpliva na razvijanje socialnih veščin sodelovanja, konstruktivne izmenjave mnenj, predlogov in skupinsko težnjo po čim kvalitetnejši izvedbi dela. Tako pridobljeno znanje in kompetence omogočijo bodočemu inženirju kvaliteten dialog s strokovnjaki drugih profilov v praksi in sodobni interdisciplinarni pristop k reševanju nalog.

Objectives and Competences:

Students obtain or improve competencies in the field of knowledge and handling of advanced characterization methods and are able to critically evaluate the feasibility of using a particular technique. The purpose of seminar exercises, integrated in the laboratory work, is connecting the experimentally obtained results with the theoretical ones. Students thus show that they are able to computationally evaluate specific problems from the field of material science and relate them to mechanical, electrical, thermal properties of the selected materials. Working in a group affects the advance of social skills of cooperation, constructive exchange of opinions, ideas and group ambition for the best possible work. The expertise and competencies acquired in this way enable the future engineer to have a quality dialogue with experts of other profiles in practice and a modern interdisciplinary approach to problem solving.

Predvideni študijski rezultati:

Znanje in razumevanje

Študentje spoznajo soodvisnost med zgradbo in lastnostmi materialov ter spoznajo inovativen pristop k reševanju dane

Intended Learning Outcomes:

Knowledge and Comprehension

Students learn about the relationships between the structure and material properties as well as learn about an innovative approach to specified

<p>problematike. Študent pridobi sposobnost za povezavo praktičnih in teoretičnih znanj. Nauči se skupinskega reševanja problemov ter strokovne komunikacije in sodelovanja z ostalimi člani skupine.</p>	<p>problem solving. The student acquires the ability to combine practical and theoretical knowledge. Students acquire group problem solving, professional communication and cooperation with other group members.</p>
<p><u>Uporaba</u> Predmet pri študentu razvija sposobnost prenosa znanj iz teoretičnih v praktična na konkretni problematiki ter študentu omogoča okrepitev socialnih kompetenc na podlagi dela v skupini. Pridobljena znanja je sposoben uporabljati za samostojno, logično in kritično razmišljanje o lastnostih, načrtovanju, izbiri in uporabi različnih materialov.</p>	<p><u>Application</u> The course develops the student's ability to transfer knowledge from theoretical to practical on specific problems. It enables the student to strengthen social competencies based on group work. Students are competent to use the acquired knowledge for independent, logical and critical thinking about the properties, tailoring, selection and use of several materials.</p>
<p><u>Refleksija</u> Znanja, ki so uporabna pri laboratorijskih in seminarskih vajah tega predmeta so vezane na vsebine premetov, ki obravnavajo materiale, njihovo načrtovanje, uporabo in njihov propad. Zaradi svoje interdisciplinarnosti so povezane tudi z osnovnimi znanji s področij fizike in kemije.</p>	<p><u>Analysis</u> Practical course and computation depends on course curriculum addressing the development of materials, their design, use and failure. Due to the interdisciplinarity nature, the course is also related to basic knowledge from the fields of physics and chemistry.</p>
<p><u>Prenosljive spretnosti</u> Sposobnost uporabe principov vede o materialih pri njihovi karakterizaciji in vrednotenju njihovih lastnosti tako pri raziskovalnem kot razvojnem delu.</p>	<p><u>Skill-transference Ability</u> Ability to apply the principles of material science with respect to evaluation of materials' functional properties in research and development work.</p>

Metode poučevanja in učenja:

- Seminarske in laboratorijske vaje
- Skupinsko projektno delo

Learning and Teaching Methods:

- Solving computational problems,
- practical course,
- individual seminar work

Načini ocenjevanja:

Pisni izpit (100 %).

Opravljeno projektno delo je pogoj za pristop k izpitu.

Delež (v %) /

Weight (in %) **Assessment:**

100 %

Written exam (100 %).

Accomplished project work is a prerequisites to exam attendance.
