different pollutants.

Predvideni študijski rezultati:

Znanje in razumevanje

Študent bo spoznal osnovna okoljska onesnaževala. Iz lastnosti okoljskih onesnaževal, ki jih je že delno spoznal pri drugih predmetih, lahko oceni njihov vpliv na kvaliteto okolja. Iz predstavljenih procesov za zmanjševanje emisij bo znal oceniti mejne vrednosti posameznih onesnaževal v okolju in jih pravilno določiti s primerno analizo tehniko.

Uporaba

Študent je sposoben kritično ovrednotiti vpliv posameznega onesnaževala na okolje in oceniti nevarnost, ki jo predstavlja za ljudi.

Refleksija

Študent bo pridobil tudi določen občutek za kritično oceno kvalitete okolja.

Prenosljive spretnosti

Študent bo znal uporabljati osnovne analize metode za hitro določanje onesnaževal. Na osnovi teh meritev in njihove kritične ocene bo lahko sklepal o onesnaženosti okolja.

Intended Learning Outcomes:

Knowledge and Comprehension

Student will be informed about principal environmental pollutants. They can evaluate their influence on environment quality from their properties, which were in part introduced in other courses. Limit values of certain pollutants in the environment will be evaluated from the presented processes for emission lowering and accurately determined by an appropriate analytical technique.

Application

Student is able to critically evaluate the influence of particular pollutant on the environment and assess the risk for the population.

Analysis

Student will gain a certain ability to critically evaluate the environmental quality.

Skill-transference Ability

Student will be able to apply basic analytical methods for rapid pollutant determination. They will be able to assess the environmental pollution, based on these measurements and their critical evaluation.
